US-09-635-501-2

Sequence 2, Application US/09635501

Fatent No. 6884711

GENERAL INFORMATION:

APPLICANT: Acton, Susan L. et al.

APPLICANT: Acton, Susan L. et al.

TITLE OF INVENTION: ANGIOTENSIN CONVERTING ENZYME HOMOLOG AND THERAPEUTIC

TITLE OF INVENTION: DIAGNOSTIC USES THEREFOR

FILE REFERENCE: MNI-132CP3

CURRENT APPLICATION NUMBER: US/09/635,501

CURRENT FILING DATE: 1999-09-29

PRIOR PILING DATE: 1999-09-29

PRIOR FILING DATE: 1998-09-29

PRIOR FILING DATE: 1998-09-30

                                                                                                                                                            Patent No. 6592865
GENERAL INFORMATION
PATENT NO. 6592865
GENERAL INFORMATION
APPLICANT: Tom Parry et al.
TITLE OF INVENTION: Method and Compositions for Modulating ACE-2 Activity FILE REFERENCE: PFS57
CURRENT APPLICATION NUMBER: US/10/158,847
CURRENT FILING DATE: 2002-06-03
PRIOR FILING DATE: 2001-06-04
NUMBER OF SEQ ID NOS: 158
SOFTWARE: Patentin version 3.1
SEQ ID NO 140

The present invention relates to a crystal (I) comprising an angiotensin-
converting enzyme-related carboxypeptidase (ACE2) or its homolog. (I) is
useful for detecting chemical compounds such as ligand, antagonist,
agonist, inhibitor, antibody, peptide, protein or drug having capability
of binding to the active site of the ACE2 protein. The present sequence
is human ACE2, used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Crystal of angiotensin-converting enzyme-related carboxypeptidase or its homolog, useful for detecting compounds e.g. ligands capable of binding to angiotensin-converting enzyme-related carboxypeptidase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          enzyme-related carboxypeptidase; ACE2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB 8; Length 595;

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A purint cleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. call proliferative disorders, endocrine disorder, neurological disorder, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp infections caused by virus, bacteria, fungi or parasite. The dithp infections caused by virus, bacteria, fungi or parasite. The dithp infections caused by virus, bacteria, fungi or parasite. The dithp infections caused by virus, bacteria, fungi or parasite. The dithp promethisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers, and for somatic or germline constitution. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   378

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a human angiotensin converting enzyme-2 (ACE-2). ACE-2 is expressed predominantly in kidneys and testis. The sequence of the full length ACE-2 cDNA was determined from a clone obtained from a cDNA library prepared from mRNA of a human heart of a subject who had congestive heart failure. ACE-2 has significant sequence homologies with ACE enzymes, and has also been shown to hydrolyse angiotensin I into Ang. (1-9). The ACE-2 therapeutics are used to treat blood pressure related diseases and conditions, such as hypertension, congestive heart failure, chronic heart failure, acute heart failure, myocardial infarction, atherosclerosis and renal failure
                                                                                                                                                                                                                                                                         Human; angiotensin converting enzyme-2; ACE-2; angiotensin I; Ang. (1-9); blood pressure; hypertension; congestive heart failure; atherosclerosis; chronic heart failure; acute heart failure; myocardial infarction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated nucleic acid encoding angiotensin converting enzyme-2 (ACE-2) polypeptide useful for detecting an ACE-2 therapeutic for treating hypertension, congestive heart failure, myocardial infarction, atherosclerosis and renal failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                 This is amino acid sequence #1 of human MPROTIS. The MPROTIS polynucleotide and polypeptide sequences can be used for the treatment of Myperension, myocardial diseases, apoplexy, heart diseases, nervous denaturation, Alzheimer's disease and diseases related to the processing of peptide hormones and cytokines
                                                                                                                                                                                             9
                                                                                                                                                                                                                 78

The invention relates to the metalloenzyme Zace2. Zace2, an angiotensin-
converting enzyme is a zinc metallopeptidase that plays roles in blood
pressure regulation and fertility. Zace2 can be expressed by standard
recombinant methodology. Zace2 polypeptides are useful for treating an
inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis),
diseases associated with inflammation like arthritis and entercolitis,
as targets for identifying modulators of zinc protease activity, for
careening or identifying new angiotensin-converting enzyme (ACB)
inhibitors, and as a basis for rational drug design for inhibitory
molecules. The nucleic acide can be used to detect the expression of a
cace2 gene in a biological sample, as probes for in vivo diagnosis and
for detecting and localizing Zace2 gene expression in tissue samples, to
determine whether a subject's chromosomes contain a mutation in the Zace2
gene, and to detect aberrations associated with the Zace2 locus.
Inhibitors of ACB are used for treating hypertension of various
conditions, including left ventricular systolic dysfunction, progressive
cenal impairment, solaroderma renal crisis, congestive heart failure due
to dysfunction, and treatment of atherosclerosis. Zace2 agonists may be
used to treat infertility while Zace2 antagonists are used for inducing
infertility. The present sequence represents the human Zace2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

for sequence specific modulation of gene expression or in the analysis of single base-pair mutations in the gene. Nucleic acid sequence encoding TEE2 is useful in therapeutics, diagnostics and in screening assays. ACE 2 antagonist is used to treat hypertension or congestive heart failure (CHF). ACE agonist is used to reduce the inflammation and pain resulting from an insect sting or bite, which was accompanied by an injection of bradykinin. Anti-ACE-2 antibodies are used to monitor ACE-2 protein abserrant protein level
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; angiotensin converting enzyme-2; ACE-2; therapy; hypertension; peptidyl dipeptidase A; blood pressure; hypotension; atherosclerosis; myocardial infarction; heart failure; arrhythmia; renal failure; gene; inflammation; fertility; enzyme; BC 3.4.15.1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human angiotensin converting enzyme-2 (ACE-2) polypeptides and polynucleotides. ACE-2 is also known as peptidyl dispeptidase A (EC 3.4.15.1). Polypeptides of the invention are useful for treating or preventing the development of abnormal blood pressure and diseases or disorders associated with the protein in a subject. The diseases include hypertension, hypotension, congestive heart failure, chronic heart failure, acute heart failure, mycoardial infarction, atherosclerosis, arrhythmia and renal failure. They are also useful for treating inflammatory conditions and diseases relating to fertility. The present sequence is human full-length ACE-2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

The present invention describes a new method of treating a body weight disorder, increasing muscle mass and decreasing body fat by administration of angidenenic converting enzyme (ACE) -2 modulating compound. The invention can be used for treating body weight disorders, particularly obesity of at least grade 1, diabetes, atherosclerosis and a staticularly obesity of at least grade 1, diabetes, atherosclerosis and a cation weight loss, rapid metabolism. The method is used for treating capid weight loss, rapid weight gain, anorexia, cachexia, bulimia, generalised partial lipodystrophy, familial partial lipodystrophy, concentrate metabolic rate, hyperrophy, acute heart failure, chronic heart failure, left ventricular hyperrophy, acute heart failure, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease and Huntington's disease), alzheimer's disease, parkinson's disease and Huntington's disease), myocardial infarction, cardiomyopathy, systemic inflammation response syndrome, sepsis, polytrauma, inflammatory bowel disease, acute and

The invention relates to an isolated polypeptide, comprising fully defined human Zace2, murine Zace-5, or murine Zace2-10 polypeptide. An expression vector containing Zace2 pormucleotide is useful for producing Zace2 protein. The polymucleotide is useful as a diagnostic probe for detecting a product of Zace2 gene expression in a biological sample. The polypeptide is also useful for decreasing inflammation associated with a condition such as inflammatory bowel disease, arthritis or enterocolitis. The polypeptide is useful for treating Crohn's disease and ulcerative colitis. The polypeptide is useful for producing labelled angiotensin II, for identifying modulators of Zinc protease activity and for identifying angiotensin converting enzyme (ACB) inhibitors. The polymucleotide is useful in gene therapy techniques to treat the above mentioned disorders. The polymucleotide is also useful for determining whether a subject's chromosome contains a mutation in the Zace2 gene. The present sequence represents the amino acid sequence of human zinc metallopeptidase Zace2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           QECLLLEPGLNEIMANSLDYNERLWAWESWRSEVGKQLRPLYEBYVVLKWEMARANHYED 180

The invention relates to novel isolated angiotensin converting enzyme (ACE)-2 binding polypeptides (I), which are useful for treating, preventing or ameliorating Mypertension, congestive heart disease in an animal. The peptides are useful for detecting, isolating, or purifying CC ACE-2 proteins or ACE-2 like polypeptides in solutions, mixtures, or biological samples; for inhibiting or reducing stenosis, pain, cinflammatory reactions, abnormal histamine release, vasoconstriction, diseases or disorders related to vasoconstriction, and diseases and/or disorders associated with aberrant action of ACE-2; to detect, isolate, or remove ACE-2 target proteins in solutions, and also to identify cor remove ACE-2; to detect, diagnose, prognose, or monitor cardiovascular diseases, and disorders associated with aberrant calculations, and disorders especially or cell proliferation; for preventing and treating candisorders, e.g., acute glomerulonephritis, and diseases associated with aberrant calculations or assay protein levels in a biological samples by their ACE-2 expression, and for identifying cells, such as cardiac myocytes, endothelial and epithelial cells of Bowman's capsule. The peptides are especially useful for treating, preventing, or ameliorating diseases or disorders associated with hypotensin, isochemia, asthma, allergy, multiple sclerosis, cancers, Parkinson's and Alzheimer's diseases, rheumatoid active hepatitis, Crohn's disease, cardiaces, AIDS, and sepsis. In an example of the invention, ACE-2 cardiaces. AIDS, and sepsis. In an example of the invention, decises of peptide families. This sequence represents a human angiotensin converting curyme 2-like protein. ¥8888888888888888888888888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for increasing vasoconstriction or ameliorating a disorder resulting from low blood pressure, which comprises administering to an individual an amount of angiotensin II in compination with angiotensin 1-9. Angiotensin has hypertensive and compination with angiotensin 1-9. Angiotensin has hypertensive and compination with angiotensin or ameliorating a disorder resulting from IOV increasing vasoconstriction or ameliorating a disorder resulting from IOV blood pressure, such as hypotension, shock or syncope. ABR5553 to ABR55708 represent angiotensin converting enzyme 2 (ACE-2) binding peptides, ABR56709 to ABR5672 and ACC79021 to ACC79025 represent sequences used in the exemplification of the present invention. Human ACE 2 is located to chromosome X, more specifically to Xp22. N.B. ABR5653 to ABR56572 represent SRQ ID NO:1 to 10 and should be the same as ABR56572 represent SRQ ID NO:1 to 10 and should be the same as ABR56573 to ABR56582 but the Z's given at the beginning and end of the peptides in the disclosure have been expanded to Glx in the Sequence Listing and in this case the Z's do not represent Gln or Glu (see pages 1 to 7): SRQ ID NO:40 to 136 in the Sequence Listing (see also pages 7 to 17) to 177)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Increasing vasoconstriction or ameliorating a disorder resulting from low blood pressure, e.g. hypotension, shock or syncope, comprises administering an angiotensin II in combination with angiotensin 1-9 to an individual.

Human angiotensin converting enzyme-2 (ACE-2) N720D

```
The invention describes a compound that modulates bioactivity of an anglotensin converting enzyme-2 (ACE-2) polypeptide. The compound is identified by contacting an ACE-2 polypeptide with a test compound under conditions for modulation of the bioactivity of the polypeptide; and detecting modulation of the bioactivity of the polypeptide by the test compound as compared to a control. Also described is a method for modulating the bioactivity of an ACE-2 polypeptide by contacting the ACE-2 polypeptide by contacting the ACE-2 polypeptide by contacting the ACE-3 polypeptide with a compound that has been identified. The method is useful for identifying a compound that modulates the bioactivity of angiorensin converting enzyme-2 peptides. The inventive method identifies other potential substrates of ACE-2 polypeptides and the product of the enzymatic reaction. The comparison of the mass spectra of the test compound was converted into a new compound, in which case the test compound is a substrate of the ACE-2 polypeptide. This is the amino acid sequence of human angiotensin converting enzyme-2 (ACE-2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360

The invention describes a compound that modulates bioactivity of an angiotensin converting enzyme-2 (ACB-2) polypeptide. The compound is dentified by contacting an ACB-2 polypeptide with a test compound under conditions for modulation of the bioactivity of the polypeptide; and detecting modulation of the bioactivity of the polypeptide by the test compound as compared to a control. Also described is a method for modulating the bioactivity of an ACB-2 polypeptide by contacting the ACB-2 polypeptide by contacting the ACB-2 polypeptide by contacting the ACB-3 polypeptide with a compound that has been identified. The method is cusful for identifying a compound that modulates the bioactivity of an ACB-3 polypeptides and the product of the angiotensin converting enzyme-2 peptides. The inventive method identifies other potential substrates of ACB-2 polypeptides and the product of the compound with that of the reaction mixture after incubation indicates whether the test compound is a substrate of the ACB-2 polypeptide. This is the amino acid sequence of human angiotensin converting enzyme-2 (ACB-2) (N72DD mutcant. Note: This sequence does not appear in the printed converting enzyme-1 (ACB-2) entotication but has been created by the indexer using information given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              198

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    peptidy1-dipeptidase A (EC 3.4.15.1) - rat

NiAlternate names: angiotensin converting enzyme; kininase II
C;Species: Rattus norvegicus (Norway rat)
C;Species: Rattus norvegicus (Norway rat)
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: JU2038

Deptidy1-dipeptidase A (EC 3.4.15.1) - chicken
NyAlternate names: anglotensin converting enzyme
C;Species: Gallus gallus (chicken)
C;Species: Gallus gallus (chicken)
C;Species: Gallus gallus (chicken)
C;Accession: JC2489
B;Catcession: JC2489
B;Catcession: JC2489
A;Title: Chicken lacks the testis specific isozyme of anglotensin converting enzyme founc
A;Reference number: JC2489

peptidyl-dipeptidase A (BC 3.4.15.1) precursor - horn fly
Nalernate names: anglotensin I-converting enzyme
C;Species Haematobia Irritans (horn fly)
R;Wijffelb, G.; Fitzgerald, C.; Gough, J.; Riding, G.; Elvin, C.; Kemp, D.; Willadsen, P. Bur. J. Blochem. 237, 414-423, 1996
A;Title: Cloning and characterisation of angiotensin-converting enzyme from the dipteran A;Reference number: 865431; MUID:96215437; PMID:8647080
A;Accession: 865472
A;Molecule type: DABA
A;Residues: 1-611 (WIJ)
A;Cross-references: UNIPROT:010715; UNIPARC:UPI0000125220; EMBL:L43965; NID:g908759; PIDN
